

CSN® cartridge radiator type 9IG

DESCRIPTION

The cartridge heaters of the 9IG series are characterised by a precise thread as well as an integrated control and limiter system and are particularly suitable for heating low-viscosity oil, hydraulic oil and heat transfer oil up to a maximum temperature of 80°C. This integrated system not only guarantees reliable temperature control with our cartridge heaters, but also provides effective protection against overheating. This efficient and versatile heating solution can be perfectly customised to your demanding industrial applications.

PRODUCT ADVANTAGES

- Heating element can be replaced without emptying the tank
- Certificates such as EAC available on request
- High efficiency
- Design with optimised surface load guarantees long service life
- Radiator surface easy to clean (removal of deposits)
- Individually configurable design possible - power / voltage / materials
- Metal connection cover - no plastic
- Version with built-in temperature controller and temperature limiter
- Also available as a sealed version
- Guaranteed spare parts supply over a period of 20 years
